

LINN HTET

Automation Software Engineer

✉ linn.htet@outlook.com ☎ [+6582668637](tel:+6582668637) 📍 Singapore

🌐 <https://rickylinn.github.io>

Summary

Innovative Automation Software Engineer with experience in automation, IoT, and software development. Skilled at solving complex problems, optimizing processes, and delivering reliable solutions. Strong collaborator with a passion for bridging technology and business needs to drive efficiency and growth.

Education

Technology University (Hmawbi)	Bachelor Degree
Mechatronics Engineering	
Singapore Polytechnic	Specialist Diploma
Mechatronics, Robotics & Automation	

Experience

<u>Linkwise Technology Pte Ltd</u>	Singapore
Jan, 2023 - Present	
Senior Automation Analyst	Jan, 2023 - Present
Designs integrated BA/IA & IoT solutions, translating client needs into scalable, secure system architectures and technical proposals, working closely with sales teams.	
Project Manager	June, 2018 - Dec, 2022
Leads end-to-end project delivery, coordinating cross-functional teams to ensure scope, schedule, cost, and quality objectives are met.	
<u>DigiNET Automation Myanmar Group</u>	Myanmar
Senor Application Engineer	Nov, 2016 - April, 2018
Designs and delivers automation solutions especially Smart Building and IoT, supporting system integration and operations.	
<u>Simple Technology Co., Ltd</u>	Myanmar
Software Engineer	Sept, 2015 – Oct, 2016
Designs and builds reliable ELV system software solutions, focusing on functionality and maintainability.	

Certifications

Aveva Edge (Formely Wonderware) Application Developer
Loytec L-Studio Application Developer
Schneider Machine Expert Logic Certificate

Volunteering

Ubuntu Myanmar LoCo Team	varcamp
https://play.var.camp	

Skills

Programming

Practical experience in JavaScript, PHP, and scripting skills for automation industry and web applications.

●●●●○

PLC/DDC Programming (ST, Ladder, FB)

Develops and supports PLC automation logic across diverse platforms.

[Schneider, Delta, CodeSys, Niagara, Loytec, ...]

●●●●○

HIM/SCADA System

Design and deployment of control & monitoring systems, HMIs, and dashboards. [Wonderware, PCVue, VTSCADA,...]

●●●●●

Operating System (Linux, Windows Server)

Comfortable with system setup, configuration, and deployment for industrial and IoT applications

●●●●○

Industrial Protocols

Proficient in Modbus, BACnet, Dali, OPC UA, MQTT, LoRaWAN and other standard communication interfaces.

●●●●●

Others Domain Knowledge

Building Automation Control

Concept, Colud solution deployment, Database(Postgres, MySQL, MSSQL) and SQL Language, Electrical Control System, Lighting Control System

Personal Data

Nationality : Myanmar

Age: 33

Marital Status : Married

Languages : English

Expected Salary : S\$6100

Notice period: 1 month

Projects

Exeo Global - Building Management System (Click to view more)

- Core Responsibilities - System architecture and overall design, control panel design, DDC program development, GUI and dashboard implementation, and system integration.
- Protocol - BACnet IP, Modbus RTU/TCP, OPC UA, Dali & Web Service API
- Integrated Services - HVAC, Lighting, Security, Fire Alarm, P&S

BCA Academy - Data Center Infrastructure Management System (Click to view more)

- Core Responsibilities - System redundancy design, SCADA system development for Green Mark report (SS564 Compliance), On-site system setup, integration, and commissioning with third-party systems.
- Protocol - Modbus RTU/TCP, SNMP, Web Service API
- Integrated Services - CRAC Unit, In-Row Cooling Unit, PDU, NOVEC System

SinMix Batching Plant - Material Handling System (Click to view more)

- Core Responsibilities - Collaborate with sales to develop solution proposal, generate BOM list, Control strategy and program design, PLC Program development
- Protocol - Ethernet IP, IO-Link, Schneider TeSys Island
- Integrated Services - Conveyor and elevator systems for automated raw material handling and transfer to batching plant.

UMC Singapore - LoRaWAN-Enabled IoT Monitoring Platform (Click to view more)

- Core Responsibilities - Solution proposal preparation and system design, Network server setup, configuration, and deployment, Web-based dashboard design and implementation, Integration with existing control system.
- Protocol - LoRaWAN, MQTT, Modbus TCP
- Integrated Services - Vibration monitoring sensor and Leak detection sensor
